

SENIOR INFRASTRUCTURE / SRE / PLATFORM ENGINEER

Cloud & Reliability · AI/LLM in Production · DevOps · Python Automation

Lisbon, Portugal (EU Residence Permit) | Remote (EU/UK)

SUMMARY

Hands-on infrastructure and reliability engineer. 6+ years building, deploying, and operating production systems — from AI/LLM pipelines to algorithmic trading platforms to 200-GPU compute infrastructure.

Currently: deployed AI agent (OpenClaw) on AWS/GCP via Terraform. Built and run AI/LLM pipeline in production for 1+ year on GCP. Building CI/CD reference repository with GitHub Actions.

Previously: co-built two trading platforms (3-person team, zero data loss). Managed ~200 GPUs across multiple locations for paying clients (24/7, 4 years). Built real estate automation — migrated to AWS/GCP, still running 3+ years later.

I learn fast, build with what works, and keep things running. I ship it, monitor it, and own it.

CORE COMPETENCIES

Infrastructure & SRE: Linux, Docker, Terraform, VPS, incident response, failure handling, uptime maintenance

Observability: Prometheus, Grafana, structured logging, alerting, remote monitoring across distributed locations

AI/LLM: OpenAI + Anthropic APIs in production, multi-model routing, confidence scoring, fallback strategies, AI agent deployment

Cloud & Networking: AWS (EC2), GCP (Compute Engine, Cloud Monitoring), VPC, subnets, DNS, IAM, firewall rules, security groups

Python Automation: asyncio, aiohttp, FastAPI, API integrations, web scraping, Telegram bots

Self-Directed: Independently adopting new tools from documentation to production — Terraform, LLM APIs, cloud services

TECH STACK

Languages: Python (asyncio, aiohttp), Bash, SQL

Frameworks: FastAPI

Data: PostgreSQL, GCP Cloud SQL

Infrastructure: Docker, Docker Compose, Linux (Ubuntu/Debian/HiveOS), Terraform, hardware (GPU rigs, networking)

Cloud: AWS (EC2, IAM), GCP (Compute Engine, Cloud Monitoring, IAM)

Networking: VPC, subnets, DNS, firewall rules, security groups

CI/CD: GitHub Actions, Git

Observability: Prometheus, Grafana, structured logging, health check endpoints

AI/LLM: OpenAI API (GPT, Whisper), Anthropic Claude API, n8n orchestration, OpenClaw

PROFESSIONAL EXPERIENCE

2024 – Present INFRASTRUCTURE & AI ENGINEER

Independent Projects

OpenClaw AI Agent (2026, *deployed on AWS + GCP*)

- Deployed and customized open-source AI agent via Terraform — email, calendar, browser, messaging integrations.

AI/LLM Email Pipeline (*GCP, 1+ year in production*)

- LLM email classification: OpenAI + Anthropic → confidence scoring → automated routing → human fallback. Manual processing reduced by ~60%. Entirely self-directed.

CI/CD Reference Repository (*in progress*)

- Building GitHub Actions pipeline as portfolio demonstration.

2022 – Present INFRASTRUCTURE & PLATFORM ENGINEER

Algorithmic Trading Platform | Fintech

(Team of 3: 1 architect + 2 engineers incl. me)

CBOE Options Trading (2023 – present)

- Initiated concept, researched and validated strategies, co-developed with team
- Integrated CBOE (2 APIs), Interactive Brokers, Polygon
- Configured Prometheus + Grafana observability on VPS — monitoring, logging, alerting
- Maintained platform reliability — diagnosed issues, escalated when needed. Zero data loss

Crypto Arbitrage (2022 – 2023, completed)

- Co-built cross-exchange arbitrage bot, multiple crypto exchange APIs. VPS, hands-on monitoring.

2018 – Present AUTOMATION ENGINEER | Real Estate Tech (Sole Developer & Operator, *2 paying clients*)

- Migrated infrastructure from VPS to AWS + GCP
- Parsers across ~10 platforms (Idealista, OLX, Copart, IAAI etc.) with failure handling
- Telegram notifications — reduced client manual effort by ~70%
- Docker, consistent availability. Systems running 3+ years with minimal maintenance

2018 – 2022 GPU INFRASTRUCTURE & AUTOMATION ENGINEER

Distributed Compute Operations | Independent

- ~200 GPUs across multiple sites: hardware, assembly, OS (HiveOS), networking
- Remote monitoring and automated alerting: utilization, thermals, uptime
- 24/7 operations for paying clients — downtime = direct financial loss
- Power and cost optimization. Workload distribution and capacity planning

2001 – 2018 Technical Director & Co-Founder | Infrastructure Companies

Scaled 3 technical services companies from zero to 30 employees, €300K annual revenue. 99.9% uptime SLA across 17 mission-critical facilities (telecom, retail) with financial penalties. Incident response under 1-hour SLA. BMS/SCADA monitoring. CAPEX/OPEX up to €500K across 20-year lifecycles.

EDUCATION Master's Degree – HVAC & Environmental Protection Systems
National University of Construction and Architecture, Ukraine
Master's Degree – International Economic Relations
National Economic University, Ukraine

CERTIFICATIONS Google AI for Business — Google, 2025
Claude Code Certificate — Anthropic, 2025
The Art of Personal Management (Summa Cum Laude) — Tallinn School of Management
